

Are you unhappy with your skin's condition? Imagine the advantages of a unique regimen of treatments and techniques, where the science of advanced skincare is harnessed to deliver stunning results.

As most of us know, a facial can help skin look better for a few hours. The Dermatherapy® treatment regime goes much further. Based on real science, it achieves spectacular results that can become even more effective over time.

Performed only by qualified, knowledgeable skin therapists, Dermatherapy® can address your particular concerns and help to turn back the clock, through individualised treatments designed to rectify the signs of ageing and other skin imperfections. The unique bio-infusion process allows your skin to absorb up to 50ml of product(s), gently and without the use of chemical permeators. **This is equivalent to about one month's worth of beauty cream, absorbed in just one powerfully hydrating treatment.**

By intensively hydrating your skin, Dermatherapy® effectively redresses the visible aspects of **premature ageing**, including **wrinkles, dull skin tone, drooping, dryness, and pore size**. Regular treatments by advanced Dermatherapy® practitioners specifically deal with the causes of **acne**, and are **tailored** to the individual needs or **stressed** or **inflamed skin**.

The Benefits Of Dermatherapy® Treatments

Everyone dreams of healthier, younger-looking skin. The complete Dermatherapy® treatments deliver a multitude of benefits, including:

- **Gentle micro-exfoliation**
 - **Massage for lymphatic drainage**
 - **Healthier-looking skin**
 - **Helps to minimise the appearance of lines and wrinkles**
 - **Tones and firms the skin**
 - **Helps to maintain optimal skin elasticity**
 - **Helps to redress skin pigmentation and areas of inflammation**
- and much, much more

The Unique Dermatherapy® Treatment

Dermatherapy® is a proprietary beauty therapy regime, created for use only by trained professionals. A sophisticated alliance between skin care and science, it is best experienced as an ongoing program. First, your visible concerns will be intensively treated. Then, Dermatherapy® is individually tailored to gently nurture and maintain a healthy, glowing skin.

The five step Dermatherapy® process

1. Skin Analysis – an up close and personal assessment of your skin, including an analysis of the causes of imperfections
2. Prescription – careful consideration of the best possible regime of products for your skin; each treatment will use a slightly different prescription
3. Pre-Treatment – most people call this part the 'facial'; cleansing, toning and massage for lymphatic drainage, preparing your skin to better absorb the prescribed products
4. Infusion – the proprietary Dermatherapy® equipment gently infuses your personalised prescription deeply into your skin: 30 minutes of pure relaxation
5. Finishing – once your prescription is fully infused your skin is prepared for the outside world, sealing in the prescription by applying finishing lotions to help ensure moisture retention and protect the skin from further damage

Soothing, gentle and painless, Dermatherapy® is the effective lower-cost alternative to harsh physical and chemical treatments. With Dermatherapy®, the necessity for radical surgical procedures is virtually eliminated.

What Happens During A Treatment

Dramatic results are immediately visible after just one Dermatherapy® treatment.

In just 60 minutes or so in the salon, your skin is analysed, cleansed, exfoliated, infused and finished with individually prescribed Bio-Pacific Skin Care products. Dermatherapy® infusion is performed by covering your skin with a moist, fine gauze and a specially designed towel mask with a modulated micro-current applied across the towel. There may be a very slight pleasantly tingling sensation when the Dermatherapy® equipment is first turned on, but this soon disappears and the treatment is soothing and relaxing.

Targeted Treatments For Continuing Results

Most people are delighted to report immediate results, from the very first treatment. Excitingly, these impressive outcomes are cumulative.

Initially, a series of weekly treatments over four to six weeks (depending on skin condition) is typically prescribed. For optimal ongoing results, regular monthly maintenance treatments are recommended thereafter.
